

Certificate No. _____

Date of handover _____

Prepared 15 September 2026

Project Handover and Acceptance Certificate

FlightraX: Flight Operations and Training Management System for WCC

This certificate records the formal handover of the FlightraX project from the developer to the client, the transfer of ownership of every account and asset that runs it, and the client's acceptance of the deliverables. It is issued in accordance with the parties' contract, under which all outputs of the engagement are the property of the client.

1. Parties

Developer (handing over)

Name _____
Capacity Freelance software developer
Email _____
Address _____

Client (receiving)

Organisation _____
Representative _____
Position _____
Address _____

2. Project

Project name FlightraX
Description Web-based system for automated flight scheduling, digital permission routing, public flight tracking monitors, and role-based approvals for students and flight instructors.
Application version 0.1.0
Production address <https://flightrax.app> (also served at <https://flightrax.vercel.app>)
Contract reference _____
Engagement period _____ to _____

3. Deliverables handed over

The developer hands over, and the client confirms receipt of, the following. Tick each item as it is received.

#	Deliverable	Description and location	Received
1	Application source code	Git repository PHCS-Team/flightrax on GitHub, with full commit history and the main and staging branches. Includes all database migrations under supabase/migrations/.	☐
2	Production deployment	Vercel project serving the application at flightrax.app and flightrax.vercel.app, with its environment variables (see Section 5).	☐
3	Domain	flightrax.app, including its DNS records for the application host and the email sending domain.	☐
4	Database and backend	Supabase project llynlpsoqds1frhzhwx: Postgres database, authentication users, six storage buckets, realtime publications, scheduled jobs, and authentication configuration (site URL, redirect allowlist, email templates, SMTP).	☐

#	Deliverable	Description and location	Received
5	Transactional email	Resend account with the verified sending domain flightrax.app and the SMTP credential used by Supabase Auth for password reset email.	☐
6	Push notification keys	VAPID public and private key pair, VAPID subject, push dispatch secret, and the dispatch configuration row stored in the database.	☐
7	Automation	GitHub Actions workflows: Keep Supabase Awake (repository variable APP_URL) and Sync Main to Staging (repository secret SYNC_PAT).	☐
8	Documentation	FLIGHTRAX: Project Application (PDF, 40 pages); README; project documents in docs/ covering flight plan specifications, free-tier limits and recovery, notifications matrix, password reset setup, and the QA checklist; the CAAP Form ATS 2019-1 asset.	☐
9	Administrative and test accounts	Credentials for the administrative access to the system and the test accounts for each role, delivered separately and securely, with passwords to be changed by the client on receipt.	☐
10	Brand assets	FlightraX logos, application icons, badge icon, and the public monitor colour palette, as contained in the repository.	☐

4. Account and ownership transfer schedule

The services below are currently registered under the developer's personal accounts, and the repository under the developer's organisation. Each is to be moved to an account owned and controlled by the client. Record the status and date of each transfer.

Service	Currently held by	Transfer to	Method and notes	Status / date
GitHub repository	PHCS-Team organisation (developer)	Client's GitHub organisation or account	Transfer repository ownership. Re-create the SYNC_PAT secret and APP_URL variable under the client account. Remove the developer as a collaborator.	☐ Done _____
Vercel	Developer's personal account	Client's Vercel team or account	Transfer the project. Re-attach the domain and re-enter all environment variables. Note: the Hobby plan is for non-commercial use and cannot deploy from an organisation repository; the client chooses the plan.	☐ Done _____
Domain flightrax.app	Developer's registrar account	Client's registrar account	Registrar transfer or account handover. Keep the DNS records for Vercel and Resend intact during the move.	☐ Done _____
Supabase	Developer's personal organisation	Client's Supabase organisation	Transfer the project between organisations. Project reference, URL, and keys are unchanged by the transfer. Then rotate the service role key and update Vercel. Note: the free plan has no automatic backups and pauses after seven idle days.	☐ Done _____
Resend	Developer's personal account	Client's Resend account	Add and verify flightrax.app under the client account, create a new API key, and update the SMTP password in Supabase Auth.	☐ Done _____

Service	Currently held by	Transfer to	Method and notes	Status / date
Push keys and secrets	Developer's environment	Client's environment	Hand over the VAPID key pair as-is (regenerating it would invalidate every device subscription). Rotate the push dispatch secret in both Vercel and the database configuration row.	☐ Done _____

5. Configuration inventory

Values are delivered separately and securely, never in this certificate. The client confirms receipt of the current value for each item.

Item	Where it is used	Received
NEXT_PUBLIC_SUPABASE_URL , NEXT_PUBLIC_SUPABASE_PUBLISHABLE_KEY , SUPABASE_PROJECT_ID	Application connection to Supabase (Vercel environment, local development)	☐
SUPABASE_SERVICE_ROLE_KEY	Server-only administrative access; to be rotated after transfer	☐
NEXT_PUBLIC_VAPID_PUBLIC_KEY , VAPID_PRIVATE_KEY , VAPID_SUBJECT	Web push notifications	☐
PUSH_DISPATCH_SECRET and the private.push_dispatch_config row	Database-to-application push dispatch; to be rotated after transfer	☐
NEXT_PUBLIC_APP_VERSION , NEXT_PUBLIC_APP_CREDITS , NEXT_PUBLIC_APP_CONTACT	Displayed application metadata	☐
Resend API key (SMTP password)	Supabase Auth custom SMTP; to be replaced under the client account	☐
GitHub SYNC_PAT secret and APP_URL variable	Branch sync and keep-alive workflows; to be re-created under the client account	☐
Supabase Auth settings: site URL, redirect allowlist, reset password email template	Password reset flow (documented in the password reset setup guide)	☐

6. Post-transfer security actions

To be completed by, or with, the client once every transfer in Section 4 is done. The developer's access ends when these are complete.

Action	Done	Date
Rotate the Supabase service role key and update the Vercel environment.	☐	
Rotate the push dispatch secret in Vercel and in the database configuration row.	☐	
Replace the Resend API key and update the Supabase SMTP password.	☐	
Revoke the developer's GitHub personal access token used by the sync workflow.	☐	
Change the passwords of all administrative and test accounts.	☐	

Action	Done	Date
Remove the developer's membership from the GitHub, Vercel, Supabase, Resend, and registrar accounts.	☐	
Take a full database dump and a copy of the storage buckets, kept outside the repository.	☐	

7. Conditions and known limitations at handover

- The system is pre-launch. There is no production data; test accounts exist for every role.
- End-to-end QA is in progress against the written checklist dated 13 September 2026.
- Push notifications and installed-app behaviour are verified on Android and desktop. iOS is implemented but not verified on a device.
- All hosting runs on free tiers. Their limits, the seven-day inactivity pause, the absence of automatic backups, and the conditions under which a paid tier becomes necessary are documented in the free-tier limits guide handed over with the project.
- Any exceptions agreed at signing are listed here:

8. Ownership and acceptance

Ownership. In accordance with the contract between the parties, all outputs of the engagement, including the source code, database schema and data, documentation, design and brand assets, domain, accounts, and configuration listed in this certificate, are the sole property of the client. The developer retains no right, title, or interest in them and will hold no copy of the client's credentials or data after the post-transfer actions in Section 6 are complete.

Portfolio reference. The developer may name the project and describe the work in a professional portfolio, without disclosing client data or credentials: ☐ Yes ☐ No

Acceptance. The client confirms that the deliverables in Section 3 have been received and inspected, that they conform to the contract, and that the project is accepted as complete, subject only to the exceptions recorded in Section 7.

Support. Post-handover support or warranty, if any, is provided for _____ days from the date of handover, on the terms of the contract.
